Importance of selecting an investment policy

Since each provident fund member is unique and expectations for financial returns and acceptable risk levels are different, a member should be able to select investment policies that are most suitable, yet able to change them as necessary and as one ages in life. This will enable the member's savings in the provident fund to grow sufficiently to meet financial needs upon retirement. For example, a provident fund member who is young with a provident fund that has a longer period to invest, will be very resilient to price fluctuations the investments may have. Such member can choose investment policies that contain equities to generate prospects of long term returns higher than fixed income investments. On the other hand, a provident fund member nearing retirement do not have a comparably long period remaining to invest, hence principal protection is of primary importance. This member should instead choose policies centered on fixed income investments to mitigate the loss from price fluctuations and the risk of the provident fund balance being insufficient to support retirement.

2.

Type of Member suitable for this Investment Policy

- This fund invests in the TMB China Opportunity Fund.
- Investment assets:

This policy mainly invests in the units of the TMB China Opportunity Fund which only holds Class I-A1-acc units of the UBS (Lux) Equity Fund–China Opportunity (USD) Fund (master fund), averaging at least 80% of NAV during the financial year. The master fund is registered in Luxembourg. The investment is USD-denominated. The remainder of the portfolio may be invested in other assets as prescribed in the fund scheme.

- Investment policy of the foreign master fund:
The UBS (Lux) Equity Fund–China Opportunity (USD) Fund invests at least two-thirds of its NAV in equities of companies established or mainly operates its business in China.

Investment Objectives

To achieve an investment return which is similar to the performance of the TMB China Opportunity Fund.

This policy is suitable for

- Members who can accept stock price fluctuations which may increase or decline lower than the original sum invested and result in a loss.
- Members seeking higher long term returns than general fixed income investments.
- Members who aim for their provident fund to appreciate sufficiently to support retirement.
- Members seeking to diversify investment risk by investing in foreign markets and can accept the risk of investing in foreign equity securities or assets.

This policy is not suitable for

- Members who require stable financial returns and full principal protection.
- Members who do not want to risk loss of principal due to investment in equities.

2. Standard Deviation (S.D.) 19.32% p.a.

5.

Investment risks

Warnings & Recommendation

- The performance of a policy that invests in equities contains short-term fluctuations, or can even incur a loss. However, the return over the long term can outpace inflation.
- This fund has no capital protection scheme.
- This mutual fund's investment is highly concentrated in China and therefore investors should consider diversify the risks in their portfolio.
- The investment of TMB China Opportunity Fund in UBS (Lux) Equity Fund–China Opportunity (USD) is mainly denominated in USD, so, in order to reduce such FX translation risk,TMB China Opportunity Fund may enter into FX swap and/or forward or futures to hedge currency risk exposures, depending on fund manager's discretion .The Fund is not fully hedge a foreign exchange risk the investors may lose or gain value from foreign exchange that has not been hedged, or may receive return less than their initial investments.
- UBS (Lux) Equity Fund–China Opportunity (USD) may invest unlisted securities and/or non-investment grade securities and/or Unrated securities more than the SEC's investment limit

Explanation of Risk

- market risk

standard deviation : SD

Market Risk means the risk that the values of securities which the Fund has invested may increase or decrease due to outside factors such as economic/ investment situations, political factors both internally and internationally which could be considered from the Standard Deviation (SD) of the Fund. If the Fund has a high SD, it is an indicator that the Fund has high a fluctuation from the changes in the prices of securities.

High sector concentration risk

Remark : The concentration occurs among Finance and Securities

High country concentration risk

Remark : Remark : The concentration occurs among CHINA

- exchange rate risk

Currency Risk is the possibility that changes in exchange rate will affect the value of investment units. For example, if a mutual fund invests in securities denominated in US Dollar during Thai Baht depreciation and the units are subsequently sold when Thai Baht appreciates, the mutual fund will receive lower return in Thai Baht. On the other hand, if the same fund invests in securities denominated in US Dollar during Thai Baht appreciation and the units are subsequently sold when Thai Baht depreciates, the mutual fund will receive higher return in Thai Baht. Therefore, currency hedging techniques as follows are key tools to manage such risk.

- Hedging at discretion of the fund manager: Investors may be exposed to currency risk because it is the discretion of the fund manager whether to use a currency hedging technique.
